Automated data agreements to simplify SSI work flows by iGrant.io

by ruud | Apr 9, 2021 | IOC2

iGrant.io is an SSI enabled consented data exchange platform with auditable data agreements, helping organisations unlock the value of personal data. In the Automated Data Agreement (ADA) project, we accelerate SSI adoption by connecting Data Agreements to a legally endorsed Data Protection Impact Analysis (DPIA), automating the flow from DPIA to SSI workflow. This ensures that any company adopting SSI for data exchange has a highly auditable solution where any data agreement receipt can be substantiated by a code of conduct to the originating DPIA performed.

Data Agreements: Building a reference implementation

Data Agreement Specification

Abstract

A Data Agreement records the conditions for an organization to process personal data in accordance with privacy regulation (e.g. GDPR) captured in a signed receipt given to the individual. To automate creation of the record and increase the trust assurance a Data Protection Impact Assessment may be used to populate the record.

News from the Operations Team

Nick Hayfack

(Inputs and Semantics WG representative on the ToIP Operations Team)

The purpose of the Operations Team is to create a small group of ToIP members who will share information on the workplans of our WGs, help ensure that draft deliverables are advancing as intended through the stages of the ToIP workflow, resolve any bottlenecks that arise around decision-making/approvals and discuss issues such as (for example) introducing firmer parameters for the creation of Taskforces under all WGs.

The Operations Team will not be directing or otherwise interfering with the development of content and deliverables in the WGs themselves.
