

# Presentation Series

## Our Goal

Sharing information about ecosystem projects and related topics during conception, development and operation is one of the core objectives of the Ecosystem Foundry Working Group. In this way we hope through community participation to make project outcomes better and to expand our thinking about what a successful ToIP ecosystem is. We have been fortunate to have hosted many thought-provoking presentations at the EFWG since its inception. We will continue the series into 2022 and hope to see everyone there!

## Share Your Community

If you or someone you know would be interested in getting on the 2022 Presentation Series Calendar please reach out to:

- [Eric Drury](#)
- [P A Subrahmanyam](#)
- [Steve Magennis](#)

We are primarily looking for organizations and individuals that fall into one or more of the following categories:

- Contemplating, building or operating a ToIP aligned ecosystem
- Dealing with business challenges that involve identity, credentials, trust or privacy (may or may not already be looking into ToIP topics)
- Have interesting insights related to encouraging the proliferation of ToIP aligned ecosystems

## 2023 Presentation Calendar

| Date           | Organization                   | Presenter                                                                                                                                                                                                                                                                                                                                                                                                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Recording                 |

| Dec 7, 2023    | <a href="#">nuggets</a>        | Seema Khinda Johnson, CEO                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Trusted Transactions powered by decentralized identity and payment wallets.</b> Decentralized identity, verifiable credentials and payment wallets combine to support compliance and eliminate fraud via a seamless user experience and increased enterprise efficiencies                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="#">Zoom Link</a> |
| Sept 14, 2023  | <a href="#">Continuum Loop</a> | Darrell O'Donnel, CEO                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Building Minimum Viable Ecosystems.</b> Dive deep into the art of constructing Minimum Viable Ecosystems and discover how to foster trust and collaboration at every level. Don't miss this opportunity to transform your approach to digital ecosystems                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="#">Zoom Link</a> |
| March 30, 2023 | <a href="#">Disco.xyz</a>      | Evin McCullen, CEO                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Data Backpacks for All: Decentralized Identity Technologies in the Wild.</b> Evin, Co-Founder & CEO of Disco.xyz gives a demo of Disco's web app, tell us all about Data Backpacks, presents case studies with DIDs and VCs and then leads a discussion on Disco's developer tools                                                                                                                                                                                                                                                                                                                                                                                              | <a href="#">Zoom Link</a> |
| April 27       | <a href="#">MOBI</a>           | Tram Vo, CEO<br>Andreas Freund, Technology Advisor                                                                                                                                                                                                                                                                                                                                                                                           | <b>Web3 Infrastructure and the New Economy of Movement.</b> MOBI and partners are building the Web3 Infrastructure (Citopia and the ITN) using global standards to enable trusted, direct connections between parties and create an even playing field for connected ecosystems stakeholders. The cooperative infrastructure enables all to: Control and monetize their data in a decentralized and privacy-preserving                                                                                                                                                                                                                                                             | <a href="#">Zoom Link</a> |
| March 16, 2023 | <a href="#">Bhutan DHI</a>     | Jacques von Benecke, CTO                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Bhutan launches world's first Self-Sovereign National Identity platform.</b> The Kingdom of <i>Bhutan</i> through its Druk Holdings & Investment Group (DHI) has just launched a national platform based on SSI and portable digital credentials for all citizens, businesses, foreign workers and tourists. Jacques von Benecke, CTO describes the path that brought them to develop this project, the technical and non-technical challenges they faced throughout and the future for this impressive body of work.                                                                                                                                                           | <a href="#">Zoom Link</a> |
| March 2, 2023  | <a href="#">TODA/Q</a>         | Hassan Khan, CEO<br>Dann Toliver, Chief Science Officer<br>Shermineh Salehi Esmati, VP Growth                                                                                                                                                                                                                                                                                                                                                | <b>Unforgeable Peer 2 Peer asset value transfer.</b> Portable, unforgeable digital bearer assets that are truly P2P, requiring no common blockchain or centralized datastore. We'll explore use cases, market traction and the underlying technology that supports this capability.                                                                                                                                                                                                                                                                                                                                                                                                | <a href="#">Zoom Link</a> |
| Feb 16, 2023   | <a href="#">Open Origins</a>   | Mansoor Ahmed-Rengers, CEO & Founder<br>Matthew Pendlebury, Head of Engineering                                                                                                                                                                                                                                                                                                                                                              | <b>Frankli: What if your media is lying to you?</b> The wide spread use of image editing software and the emergence of high quality, fully synthetic images has dramatically eroded the trustworthy nature of visual media. We must now rely on highly skilled and trusted 3rd parties when we need to verify that what our eyes see can be trusted. This presentation explores the challenges of restoring confidence at scale and how provenance chaining techniques can help.                                                                                                                                                                                                   | <a href="#">Zoom Link</a> |
| Jan 19, 2023   | <a href="#">Microsoft</a>      | Ankur Patel, leads Growth for Identity @ Microsoft. In recent times, he has led the effort for connecting LinkedIn, the world's leading professional graph and Office 365, the world's leading productivity graph. Currently, Ankur leads Microsoft's efforts for a new form of identity for users to own and control their identity and associated data, powered with technology provided by Microsoft to empower everyone to achieve more. | <b>"Entra Verified ID: A cheaper, faster &amp; more trustworthy way to verify remote employees"</b> For the past few years, Microsoft has been working with DIF and W3C communities on building systems with decentralized identifiers and verifiable Credentials. Entra Verified ID is our standard based decentralized identity system implementation. In this session, you will learn how Verifiable Credentials can support Enterprise Scenarios, our current investments and roadmap.                                                                                                                                                                                         | <a href="#">Zoom Link</a> |
| Jan 5, 2023    | <a href="#">IDatify</a>        | Ian Davidson, Chief Growth Officer responsible for partnerships, marketing, sales, and strategy.                                                                                                                                                                                                                                                                                                                                             | <b>"The Evolving Consumption of Digital Credentials"</b> While the issuance of digital credentials has grown exponentially in the past decade we will not reach a tipping point in consumer adoption of digital credentials until they are consumed by other participants in an ecosystem that creates value for multiple stakeholders. In this discussion we will review how the digital credential ecosystem is evolving, and where value will be generated in the years to come. We will specifically discuss how digital credentials can help job seekers market themselves to employers and examine a talent marketplace that is applying digital credentials at scale today. | <a href="#">Zoom Link</a> |

## 2022 Presentation Calendar

| Date           | Organization                        | Presenter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Recording                 |

Human Resource functions are having to respond to rapid shifts in talent, both internally and externally. Internally, companies are now operating as a network of teams to better utilize existing skills, provide more agility to the business, and reduce the high cost of recruiting people. Externally, individuals with niche and specialized skills that businesses need are electing to test the contract work waters and let demand in the market provide them top dollar while also enjoying the benefits of governing their own work commitments. These shifts are raising the need for sophisticated talent marketplaces that help find, assess, and verify skills of individuals and integrate that information into core HCM systems to enable HR and people leaders to align and support workers, improve internal processes and enhance customer experience.<br><br>Jessica Townsend, Dan Brown and Colin Strasburg from Accenture will join us on February 3rd to share the relevance of dynamic work credentials and certifications and how use of verifiable credentials will improve the way internal and external talent is managed and how standing up these trusted networks enable the future of work. | <a href="#">Zoom Link</a> |
| Jan 30, 2022   | University of Waterloo              | Autumn Watkinson is a postdoctoral research fellow in the Waterloo Wetland Lab at the University of Waterloo, where she currently works on restoration of Great Lake coastal marshes. She holds a PhD in Land Reclamation from the University of Alberta where she worked on habitat restoration for endangered prairie species. Autumn's research interests lie at the intersection of restoration and conservation: restoring ecological goods and services to anthropogenically disturbed systems to create functional habitat and promote ecosystem function and health. | Working Spaces Are Ecosystems Too! An ecosystem is a community of living organisms interacting with each other and their physical environment. When you hear that definition, you might picture a pristine nature landscape, but that definition can also apply to how businesses, individuals, or organizations interact with one another. Let's talk about natural ecosystems and how we can adapt nature's lessons to our industry ecosystems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="#">Zoom Link</a> |
