

2023-02-09 TRTF Meeting Notes

Meeting Date

- 09 Feb 2023 The ToIP Trust Registry Task Force (TRTF) meets weekly twice every Thursday at the following times (to cover global time zones - see the [Calendar of ToIP Meetings](#) for full meeting info including Zoom links):
 - **NA/EU 07:00-8:00 PT / 15:00-16:00 UTC**
 - **APAC 18:00-19:00 PT / 02:00-03:00 UTC**

Agenda Items and Notes (including all relevant links)

Time	Agenda Item	Lead	Notes
5 min	<ul style="list-style-type: none">• Start recording• Welcome & antitrust notice• Introduction of new members• Agenda review	Chairs	<ul style="list-style-type: none">• Antitrust Policy Notice: Attendees are reminded to adhere to the meeting agenda and not participate in activities prohibited under antitrust and competition laws. Only members of ToIP who have signed the necessary agreements are permitted to participate in this activity beyond an observer role.• New Members:

5 min	Review of previous action items	Chairs	<ul style="list-style-type: none"> ▪ Concepts & Terminology tools & guides to be included in TRTF work <ul style="list-style-type: none"> ▪ Drummond Reed Neil Thomson : Proceeding development of tools. Tools need another 2 months. <ul style="list-style-type: none"> ▪ Terminology toolbox. Required for final glossary but terms wiki can happen in parallel. ▪ Require a mental model : Picture or diagram that shows how the group of terms relate and helps make terms clear. Drummond Reed added an example (screenshot #1 below) from this eSSIF-Labs Glossary page. ▪ Neil Thomson TR: simple lookup list. Complexity comes in proving the trust. ▪ Related Chat: <ul style="list-style-type: none"> ▪ Scott Perry Mental models are not a trivial task to build. If this is a core requirement, we need a drafting session. Unless we have Rieks do them for every group. ▪ Tim Bouma : <ul style="list-style-type: none"> ▪ DNS: Name Lookup ▪ Trust Registry: Authority Lookup ▪ Darrell O'Donnell : authenticity/provenance chain - to me that's a post v2 capability. It's helpful to back up the basic answers, but not required. Further for many systems it would be a blocker. ▪ Vladimir Simjanoski +1 for mental model. not defining it explicitly doesn't mean we don't have one when designing the underlying spec / API. getting it right is difficult, though (agreed with Scott) ▪ Neil Thomson @ Darrell - agreed on post v2. However, how do we gradually incorporate governance with that goal in mind. Separate discussion - will bring up in Gov Stack WG. ▪ Darrell O'Donnell : ▪ @Neil - I think we can get there relatively easily. When you ask "is this an Authoritative Issuer of credential type X, under EGF Y?" you may be able to ask "and how do you do this?" <p>The answer for many will be "because I am the authority" but for some it would be "see this chain of provenance".</p> <ul style="list-style-type: none"> ▪ Over time I believe systems will prefer one or the other path. Less formal ecosystems will likely stay light, while more formal/regulated ecosystems would lean towards authentic provenance.
20 mins	Recap of discussions from previous meetings.	Chairs	<p>Chairs will lead discussion on recapping & reviewing the various discussions happening in the TF meetings and Github discussions. This includes recap on Trust Registry component & Trust Task model.</p> <p>Review:</p> <ul style="list-style-type: none"> • Relevant TR Lead Stuff: <ul style="list-style-type: none"> ◦ https://github.com/trustoverip/tswg-trust-registry-tf/discussions/68#discussioncomment-4919723 ◦ Leaders got together to make sure alignment. <ul style="list-style-type: none"> ▪ Antti Kettunen descriptive work of what TR work looks like today. ▪ Darrell O'Donnell discussed his concept of the TR framework as a way for governance and technical stacks to align across all 4 layers of the ToIP stack ▪ Andor Kesselman and Antti Kettunen : How do you build the context for a decision? ▪ https://github.com/trustoverip/tswg-trust-registry-tf/discussions/68#discussioncomment-4919723 ◦ @Jacques: https://www.cira.ca/cira-dnssec-practice-statement-ca • Define TRTF Deliverables for V2 #61 <ul style="list-style-type: none"> ◦ Daniel Hardman: Drew a distinction between Layer 2 and Layer 3, as <i>relationship oriented</i> vs. <i>task oriented</i>, respectively. Defined the scope of a TR: "Is this piece of evidence grounded in conventions and entities that I consider trustworthy?" ▪ Tim Bouma expanded on that model, defining Layer 4 as rights oriented, and layer 1 as commitment oriented. <i>Is what I am relying on is accurate/legitimate and based on intentions of: 1) the rules of a governance framework, and 2) an authorized action/assertion of an actor based on those rules?</i> ▪ Darrell provided a useful diagram and also shared that the TR says: "what do I need to participate in this ecosystem?". ▪ Model the process for TRTF w/ Milestones #67 <ul style="list-style-type: none"> ▪ Andor Kesselman did some process refinements here. And Drummond provided a helpful link to relevant work happening in the TSPTF related to the process flow. ▪ Model Trust Decision Data Flow Process #68 <ul style="list-style-type: none"> ◦ Andor Kesselman with a proposal last week around trust chaining and trust discovery. Neil added some helpful commentary about vectors of trust, with data chaining, data processing chain, signing officer, and governance process. ◦ Scott Whitmire : Some concerns about "What is a trust registry?". ◦ <i>What does interoperability mean across trust registry: Darrell O'Donnell and Drummond Reed</i> • Define Requirements and/or Goals For You As a Stakeholder #69 <ul style="list-style-type: none"> ◦ Tim Bouma drew a descriptive diagram on "trust things" that has resonated with quite a few people: https://github.com/trustoverip/tswg-trust-registry-tf/discussions/69#discussioncomment-4799881 ◦ Eric Drury added some requirements around the goals and wants to know: <ul style="list-style-type: none"> ▪ What is the minimum data / meta-data (if any) contained in a trust registry? ▪ What is the minimum data essential for the functioning of a trust registry? ◦ Drummond Reed also added some good clarification on requirements in this comment here related to the quad model of holder, verifier, issuer, and registry. <ul style="list-style-type: none"> ▪ Bouma: "An actor is authorized to carry out an action, either on its own behalf, or on behalf of another actor." ◦ Jo Spencer also added some requirements here, with a lot of requirements around cross domain VDRs. • Relevant Work In TSPTF: <ul style="list-style-type: none"> ◦ Andor Suggests a Layer Above TSP that addresses reputation trust. This would be a layer above TSP and below TR.
15 mins	Trust Registry Canada Work Review	Mathieu Glaude	<div style="text-align: center;"> <h1>Using DNS Infrastructure for Trust Registry Discovery</h1> <p>ToIP Trust Registry Task Force February 9, 2023</p> </div> <p style="text-align: center; font-size: small;">© Canadian Internet Registration Authority, Northern Block Inc. CLASSIFICATION:PUBLIC</p>

Use Case Proof of Canadian Presence

© Canadian Internet Registration Authority, Northern Block Inc.
CLASSIFICATION:PUBLIC

When an entity is presented with a *verifiable* claim, there are three things they will want to ensure:

- ✓ 1. That a claim hasn't been altered/falsified at any point in time (cryptographic verifiability, VDR)
- 😞 2. That a claim has accurate representation (authn, DID Discovery/mapping within DNS)
- 😞 3. That a claim has authority (authz, trust registries/trust lists)

CLASSIFICATION:PUBLIC

Questions we want to answer

- does NB actually own that DID?
- is NB allowed to issue that VC?

How does one answer the above questions without creating a centralized architecture/solution?

Need for decentralized discovery

© Canadian Internet Registration Authority, Northern Block Inc.
CLASSIFICATION:PUBLIC

Discovery using current DNS infrastructure

- Existing secure infra, DNSSEC
- NB.ca uses DNSSEC, bound root of trust IANA-CIRA-NB (NB.ca)
- Distributed
- Publish my DID info inside my DNS Zone
- Publish trust registry pointers inside my DNS Zone

Findings to-date / Summary / Next Steps

- Implementing for general trust tasks, not only credential exchange.
- No need to change DNS - we can leverage existing DNS infrastructure as-is to support decentralized DID and TR discovery
- We're not building a TR in this scope of work
- Giving one more available input to the entity required to form a trust decision
- We will open source all of this, report back by end of March
 - We plan to contribute extension (Aries RFC) to existing credential exchange protocols to allow for interoperable discovery approach
