Agenda

Guiding Goal: KERI, a truly decentralized key management solution.

- Welcome (Paul—2.5 mins)
- Newcomer Introductions (WG—2.5 mins)
- Task Force Updates (WG, 5 mins)
 - Imaging TF (Scott)
 - Medical Information TF (Scott)
 - OCA-FHIR FG (John)
 - Notice & Consent TF (Mark)
- "The Network" model: How does it fit into ToIP? (cont.) (WG-5 mins)
 - https://humancolossus.foundation/blog/cjzegoi58xqpfzwxyrqlroy48dihwz
 - See link above. The plan is to combine the *Inputs domain* and the *Semantic domain* into one WG.
 - Related Slack channel discussion:

@Robert Mitwicki and I have been discussing the following model with a view to restructuring the WG to incorporate both sides of the model. We have a solid proposal and would welcome everyone's feedback. (edited

As you know, the Semantic Domain WG sits in the bottom half of the model and is all about data capture. We decided to stick with that theme and check if there was an umbrella term that would naturally house both data entry (Inputs domain) and data capture (Semantic domain). Of course there is!!! "Data Processing".

Defn.

Data processing is the conversion of data into usable and desired form. This conversion or "processing" is carried out using a predefined sequence of operations either manually or automatically. Most of the processing is done by using computers and thus done automatically.

So ...

Our proposal is therefore to rename the Semantic Domain WG to the Data Processing WG to incorporate the whole model.

We could then restructure the group as follows .

Data Processing WG

Inputs Domain / Semantic Domain

FG laye

We're reluctant to define the 2nd tier groups as "Task Forces" as we would run out of named tiers for the current "Focus Groups" (e.g. Semantic Domain WG / Medical Information TF / OCA-FHIR FG). The proposal would be to keep them as "Domains" rather than TFs.

We would then aim to have two calls per week: (i.) Inputs Domain call; (ii.) Semantic Domain call. Robert would chair the Inputs Domain call and I would continue chairing the Semantic Domain call.

The core infrastructure in the Inputs Domain would be $\ensuremath{\mathsf{KERI}}$ / Decentralized Key Management.

As is currently the case, the core architecture in the Semantic Domain would be OCA / Decentralized Semantics.

Feedback welcome. (edited)
