

2020-12-07 CTWG Meeting Notes

Meeting Date

- 07 Dec 2020

Attendees

- [David Luchuk](#)
- [Drummond Reed](#)
- [Rieks Joosten](#)
- [Daniel Hardman](#)
- [Dan Gisolfi](#)
- [Scott Perry](#)
- [Steven Milstein](#)

Main Goal of this Meeting:

To determine next steps with the tooling that [Daniel Hardman](#) has proposed and how this will mesh with the GitHub infrastructure that [Dan Gisolfi](#) has proposed.

Agenda

Time	Item	Lead	Notes
1 min	Welcome & Antitrust Policy Notice	Chairs	
2 mins	Introduction of new members	Chairs	
1 min	Agenda review	Chairs	
10 min	Configuring the first glossary artifacts	Daniel Hardman	
5 mins	Update on tooling proposal	Daniel Hardman	
20 mins	Presentation of GitHub tooling and processes for non-CTWG deliverables	Dan Gisolfi	
15 mins	Discussion of action plan for integrating CTWG tooling and other GitHub tooling	All	
2 mins	Review of Decisions and Action Items	Chairs	
4 min	Next meeting and holiday meeting schedule	Chairs

Notes

1. No new members were present on the call
2. Configuring the first glossary artifacts - [Daniel Hardman](#)
 - a. Each new submission would get two reviews
 - i. The CTWG validity review
 - ii. The stakeholder community review
 - b. To do this, we need to figure out what communities we have. Daniel had us fill out a simple spreadsheet for the following stakeholders:
 - i. Bedrock. Tag #bbu (for Bedrock Business Utility). Curator is DanG for now. Artifacts:
 1. Markdown (that will be rendered as other artifacts).
 - ii. eSSIF-Labs. Tag #essif-labs. Curator is Rieks for now. Artifacts:
 1. Browsable glossary
 2. Mental models glossary
 3. Terminology glossary (hyperlinkable)
 - iii. Sovrin. Tag #sovrin. Curator is Drummond for now. Same artifacts as Bedrock.
 - iv. We also agreed all ToIP WGs will need tags.
3. Update on tooling proposal

- a. [Scott Whitmire](#) asked about data formats
 - b. Daniel responded that he wants to keep the internal data model as simple as we can, and then it lets them be rendered differently
 - c. See the graphic "Richer internal data model" below
4. Discussion of action plan for integrating CTWG tooling and other GitHub tooling—[Dan Gisolfi](#)
 - a. ToIP Deliverables Portal is up and running—<https://trustoverip.github.io/deliverables/>
 - b. DanG gave us a tour of the portal and the resources available there
 - c. Each deliverable has type indicator. Each type has a set of rendering formats that can be produced under the ToIP brand.
 - i. Outputs use either MkDocs or SpecUP
 - ii. They can output all the forms we need
 - d. Daniel asked a question of DanG about how we can reference terms that we've included from other sources (example: NIST terminology)
 - i. DanG's answer is that each term should have an origin
 - ii. Our glossaries can include terms that are from other sources
 - iii. We also may need to extract an output that can be referenced someplace else (e.g., a PDF)
 - e. We discussed allowing other communities (like DIF) to get their own branded outputs - there was strong support for that
 - i. We should set up our own minimum
 - ii. MyData, DIF, etc.
 - iii. Outreach to other communities
5. Review of Decisions and Action Items - see below
6. Next meeting and holiday meeting schedule
 - a. We agreed to still meet on Monday Dec 21, and then our following meeting is Monday Jan 4.

Richer internal data model

Decisions

- ☐ We will support exports from the CTWG database to produce artifacts (e.g., glossaries, PDFs) for other communities who wish to collaborate with us (e.g., DIF, Hyperledger, W3C CCG, etc.)

Action Items

- ☐ [Dan Gisolfi](#) Produce description of the artifacts needed for a Bedrock glossary
- ☐ [Daniel Hardman](#) and [Dan Gisolfi](#): have a 1-on-1 to go over how to bring together Daniels' thinking on CTWG tooling and DanG's on ToIP deliverable process tooling.
- ☐ After the 1-on-1 above, [Daniel Hardman](#) and [Dan Gisolfi](#) meet with [RJ Reiser](#) and [Rieks Joosten](#) to discuss how their tooling proposal will meet the needs of those two curation communities.
